

Contributions:

Rohan Aggarwal (Release 20%, Overall 25%)

- Home Screen
- Profile Creation Screen
- Apple Calendar Integration
- Profile Screen Customization with Edit functionality for updating information
- Google Calendar Integration

Tejas Cheeti (Release 30%, Overall 25%)

- Login/Signup screen with Google (Authentication)
- Focus timer
- Tasks

Abhinav Bichal (Release 50%, Overall 50%)

- Groups Creation
- Groups Screen
- Join Group Screen
- SwiftUI Integration
- Firebase Firestore setup
- Core Data setup
- Basic App Chat (barely working and not really that good but it's fine)

Deviations:

We got most things done but one feature Abhinav struggled with is the in-app chat for group messaging: “Basic In-App Chat for Group Messaging”. There are difficulties with the implementation of firestore as well as an added learning curve for a fairly advanced feature, so we were unable to fully complete it for this release. We plan to complete this feature with the next release coming. We plan on working a lot more on this but the app is coming together. We plan on also starting on the stretch feature next week.
